

3D – BOSCH

PROJECT OWNER :

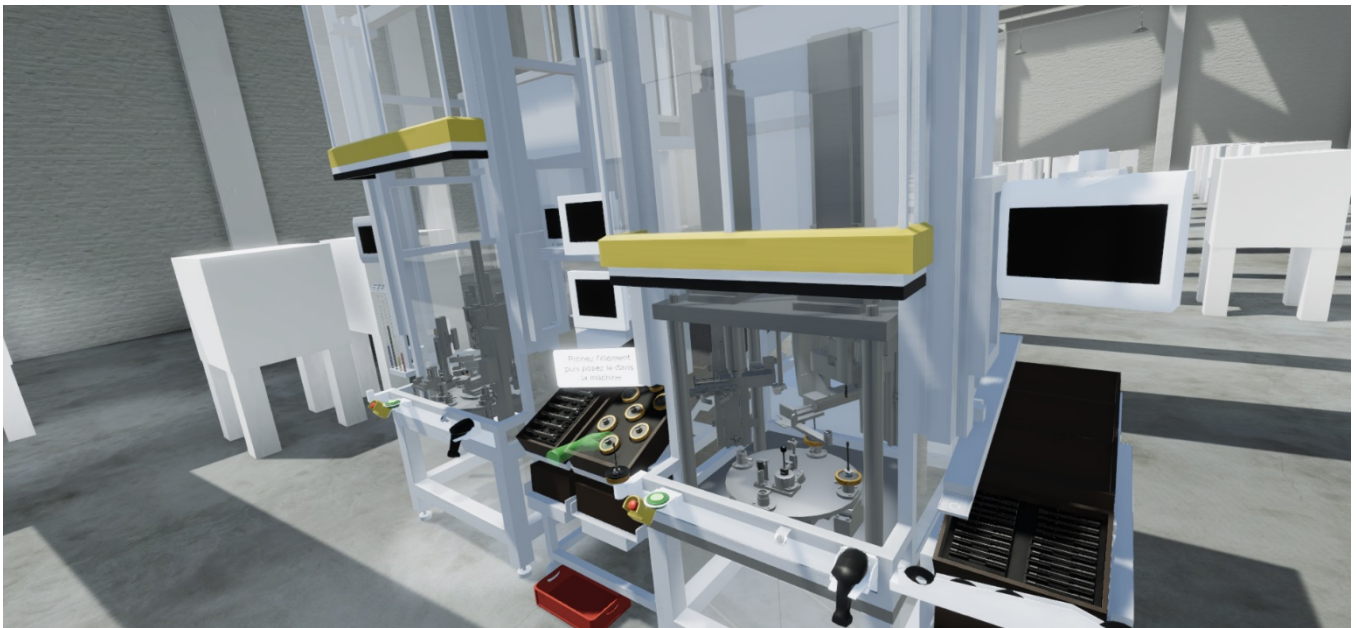

PROJECT :

Serious game on the FORD production and assembly line

USE : TRAINING

LOCALISATION :

DATE : 12/05/2017

Project description :

- Customer needs: To have a risk-free training tool to train workers on the different machines of the production line
- Target: Workers, temporary workers and factory management
- Technical means: HTC VIVE immersive headset
- Advantages: Speed of training, no risk during training, quality of training far superior to a video explanation.

Mission OREKA Ingénierie

- Processing of 3D machine models
- Animation and programming of the various machines
- Realization of interactions specific to virtual reality applications.
- Implementation of a learning system through virtual hands showing performed tasks.
