

PMA – SCHOOL GROUP CONSTRUCTION

PROJECT OWNER :

SIRP Les 3 Chênes

PROJET :

Programming study for the construction of a school complex

AREA : 1 150 m²

LOCALISATION : Auvers (50)

DATE : 2016-2019

The SIRP "Les Trois Chênes" is composed of the communes of AUVERS, APPEVILLE and MEAUTIS. Created in October 2016, Oreka decided to take on the construction of a school group in the commune of Auvers, with the agreement of the State services.

OREKA worked with the SIRP on the definition of the project in a tight financial context. We studied several scenarios of partial rehabilitation of the existing building with an extension; in the end, in agreement with the selected architectural firm, the project will be entirely new to allow the canteen to remain open throughout the construction period.

The firm's mission covered the following services:

- programme definition
- feasibility and cost estimates for construction
- Project management in the selection phase of the project manager on architectural intent
- AMO in the "studies" phase
- AMO in the "construction" phase
