

PM – RESTRUCTURING OF THE SWIMMING POOL RECEPTION AREA

PROJECT MANAGEMENT: Community of Communes of La Hague

AREA : 20 m²

PROJECT : Restructuring of the reception area of the municipal swimming pool of La Hague

LOCALISATION : Beaumont-Hague (50)

DATE : 2016

The Beaumont-Hague Community of Municipalities wanted to restructure the reception/ticket office of the Beaumont swimming pool. For this purpose, OREKA Ingénierie carried out a complete study of the interior layout to meet specific constraints such as the ergonomic study, the layout study and the expression of needs. Our objective was therefore to propose solutions that are defined by a total mastery of the client's constraints and an exhaustive consideration of the users' expectations.

Below: The collaborative and participative management of this project in the study phase was reinforced by the use of the HTC VIVE immersive 3D simulation tools. This working method and these tools enabled the future operators to discover, comment on and validate their future workstation.
