

ANALYSIS OF INDUSTRIAL FLOWS

PROJECT OWNER :

SHERING PLOUGH

LOCALISATION : Caen

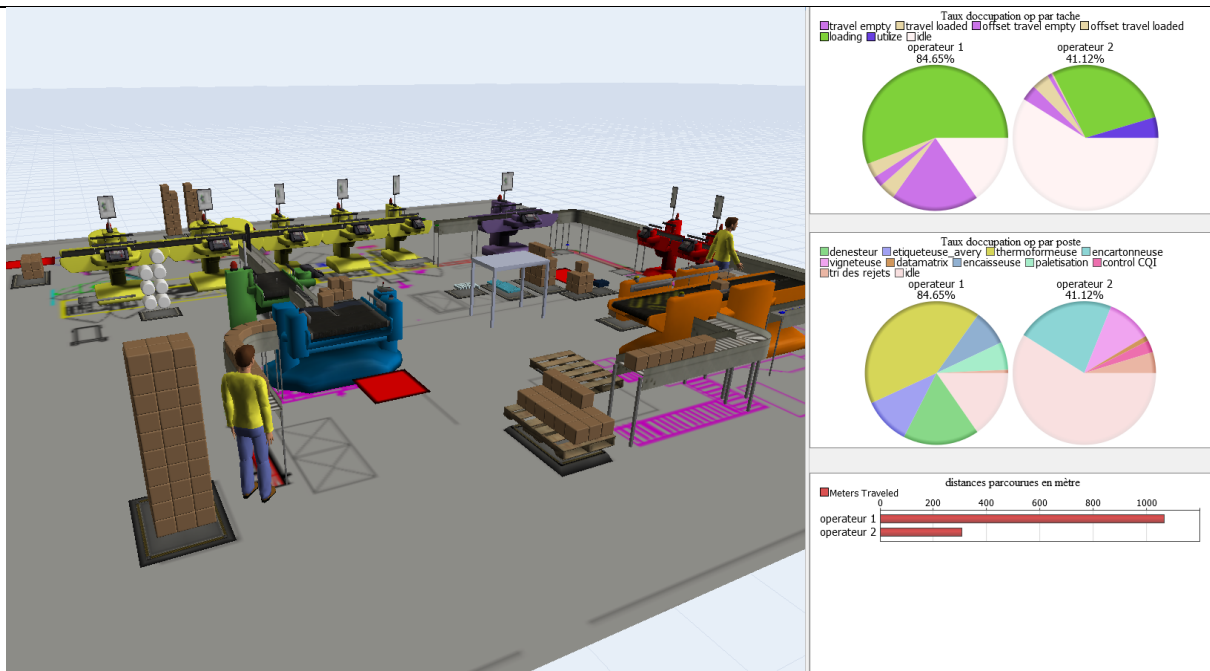

AREA : 303m²

DATE : 2014

PROJECT :

Flow study as part of the project to reorganise the syringe packaging

line

As part of its continuous improvement process, SHERING PLOUGH has launched a programme to relocate and redesign the syringe packaging line.

Oreka ingénierie's study led to the choice of a thermoforming machine. To improve the layout of the loaders while respecting the dimensional and organisational constraints of the packaging line. The study highlighted the need to place two operators on the line to make the best use of the line's speed capacity.

Number of machines: 6

Number of products: 1

Number of operators: 4
